---

NOTE.—The numerous well-known varieties of roses usually listed by me and not offered in this catalogue have not been discontinued; they have been sold out before the catalogue was printed. It is hoped that next year's listing of the last crop of Hennessey roses will show many more varieties available when catalogue is issued.

## PLEASE READ CAREFULLY

### Shipping Information and Terms, Etc.

**TERMS.**—Cash only. Send postoffice or express money order, bank draft, cash or check. Orders will be sent C. O. D. on receipt of one-half total amount of order. Absolutely no mail orders taken for orders totaling less than \$2.00, and no advance orders booked at nursery for less than that amount.

**DISCOUNTS.**—Quantity discounts only, no dealer discounts.

10% on all orders from \$10.00 to \$20.00

15% on all orders from \$20.00 to \$50.00

20% on all orders from \$50.00 up.

**SHIPPING CHARGES.**—All rose plants will be sent express collect unless we are advised otherwise. All express shipments are fully insured. Parcel post shipments are not insured unless additional fee is paid. Shipping charges remitted us which prove insufficient in amount will be applied on your charges and remainder will be collected on delivery of your roses. Minimum shipping charge, 35c.

**NO DISCOUNTS** can be given on patented roses, except for the dozen rates, which are 10 times the price of each plant, as: 12 rose bushes @ \$1.00 each—\$10.00. Whenever you see the patent number following the description of a rose you may calculate any quantity from and including six bushes, at this rate. Dozen rates may not be taken on less than six patented roses of **ONE VARIETY**.

**IMPORTANT NOTE.**—No more than 10% discount may be taken if varieties number 18 or more unless the order averages at least three rose bushes of each variety.

**PLEASE STATE** when ordering whether substitutions will be allowed. Name substitutions permitted, or leave the selection to me. I always substitute greatly similar varieties, and often more costly varieties when this makes the nearest substitution.

**SHIPPING SEASON** starts about November 1 for Eastern orders; local orders, about November 15, filled in rotation as of date booked. However, because of war conditions and shortage of labor I can make no guarantees as to delivery date. I will not ship them to any sections when ground is too hard to plant, if delays occur, and will hold the orders individually wrapped in cold storage to be shipped out in early spring on same day your notification is received. I guarantee the latter procedure to give you rose bushes in finest condition for planting, with no deterioration. (See planting instructions for conditions under which roses may be planted.)

All patented roses listed in this catalogue are being sold under license from the patent owner.

## REPLACEMENTS

I am going to make a change in my policy of replacing rose bushes. Heretofore I have devoted every ounce of energy to producing the finest and strongest rose bushes in the United States, and on top of that have amiably replaced without question any that failed to perform properly. This has been an unwitting injustice to many rose growers, as they were then careless with the plants, knowing there were "more where these came from," and free, too.

Thus Hennessey rose plants have been lost through sheer negligence or incorrect treatment, with a resultant loss of the beauty which might have been enjoyed, and much additional time and trouble in putting in the replaced plants.

Hennessey plants will outperform roses from any source if they are handled according to the clear and simple rules I lay down, and as far as I am concerned, they can jolly well be handled properly. If they are not I shall no longer be responsible.

The performance of Hennessey plants is no accident. They perform because I put an enormous amount of time and skill into producing them. After I have done my part one hundred fifty per cent, it is then up to the buyer to do his.

Hennessey rose plants will survive treatment that other rose plants are absolutely unable to come through, and because of their great vitality and fine roots, they will live in difficult climates and perform where rose growing has been given up with ordinary plants. But a rose plant is a living organism and even my plants can be greatly weakened or killed by determined people.

People do awe-inspiring things to rose plants and then blandly expect them to flourish. Some of the commoner things are leaving them in the package for weeks, or even months before planting; enthusiastically whacking off all the roots and leaving the big tops exposed to hot drying sun, failing ever to water them after planting, etc., etc.

There are also people who plant them with moderate accuracy, whereat the plant starts to grow vigorously. Then every rose that appears is cut with every possible inch of stem, so the plant has left virtually no leaves to function on. HOWEVER, I will replace all plants of which complaint is made within five days of arrival, if the plant or plants are mailed back to me.

## "HENNESSEY ON ROSES"

Most of the directions for rose care have been omitted from this catalogue because they have been treated so much more fully, and with all the underlying reasons for every course of procedure taken care of so thoroughly, in my new rose book, "Hennessey On Roses." Rose growers will profit from omission of necessarily sketchy outlines of rose care in this catalogue, and a study of the full subject together with the "why's" behind it.

The book of about 65,000 words, illustrated with numerous photographs taken in my own gardens, will be available at a pre-publication price of \$2.50 until the publication date of October 1, and after that at the price of \$3.50. Orders may be sent directly to: Roy Hennessey, Hillsboro, Oregon. The book is entirely new, and contains innumerable scientific facts behind rose behavior that have never been discovered before. It is a book of applied rose science made enjoyably readable. The book not only discusses all the facts pertaining to a knowledge of the rose which have enabled me to produce my remarkable plants (which are no accident!), but answers every question that has ever been asked me on the rose. Every bit of the book is designed to be applied to your own rose garden.

At this date hundreds of copies have been sold, previous to publication, in all parts of the country where my roses have gone. You won't find anything in the book approached from the conventional standards, and only a couple of "theories." The rest of the material consists of rose facts, the knowledge of which enables me to produce Hennessey roses. A knowledge of them will enable you to care for your roses with outstanding results, and you will greatly improve your enjoyment of your rose garden because you will be in possession of all my knowledge of what makes roses do as they do.

The book is not padded or dated with discussion of existing Hybrid Tea rose varieties which would make it obsolete in a few years. Description of best modern rose varieties is the function of this rose catalogue.

## WINTER PROTECTION OF ROSES

The best winter protection is to hill earth up around the canes of the bushes to a height of at least 8 inches. Take precautions to have these mounds WET when freezing weather comes on. If the mounds freeze when dry the bushes may not survive. When the mounds are solidly frozen, cover with evergreen boughs or similar loose open material to a depth of about six inches. The covering is to keep the mound solidly frozen by giving it additional protection against the sun's rays, and also to keep greater cold from penetrating.

## WATERING YOUR ROSES

All modern Hybrid Tea roses are everblooming, that is, capable of producing bloom from early spring to frost under good cultural conditions. An abundance of WATER is by far the most important factor assuring constant bloom. Flooding the beds is one of the finest methods of watering, next only to tile watering from underneath, and is simplicity itself if you have had the forethought to have the level of the rose beds a couple of inches below surroundings. If it is absolutely necessary to water by sprinkling, work out a watering schedule that will not allow your foliage to remain wet for more than five hours, taking night dew into consideration.

PRICES IN THIS CATALOGUE are subject to change without notice, and all orders are accepted subject to prior sale. WE DO NOT KNOW exactly how many plants of each variety we have until after roses are harvested.

## NO MORE HENNESSEY ROSES AFTER THE CROP OF 1943-1944 FOR THE DURATION OF THE WAR

In consideration of the importance of putting every bit of energy into the war effort, the crop of roses listed in this catalogue would be the last crop of Hennessey roses, if it were not for the fact that the crop of 1943-1944 is of course already in preparation, having been prepared for and started in the late summer of 1941, long before Pearl Harbor.

The fact that this crop is well along, together with the fact that a great deal of capital is tied up in it, decides me to go ahead with it. Practicality and patriotism forbid any further rose crops.

By abandoning any further plantings, I can bring through the crop already in preparation by using labor available, which is unfitted for participation in the war effort. But as further plantings require much more than double the labor now used (for rose-growing reasons taking too long to explain), I do not care to keep going through trying to attract labor from the war effort, which includes badly needed farm crops, for a luxury product. I should have to do so to continue in the rose business at the scale to which the business has grown.

This does not mean that I consider other rose growers unpatriotic, or that I think rose gardens should be abandoned. On the contrary, your rose garden is a badly needed relaxation to which you turn thankfully when your day's work is over. But if I continue to grow even small crops I must devote my entire time to them, and I believe my country deserves better of me than that.

As no one can prophesy what may happen, "Hennessey's Prize Winning Roses" may never reappear on the market, and may become simply a legend. I have, however, taken as much time as I could possibly spare over the past two and a half years, to put down in my new rose book everything that could possibly help rose growers, which makes some amends for the possible complete abandonment of my rose growing.

## HYBRID TEAS

- AMI QUINARD—A semi-double blossom of the most intense rich dusky crimson, with delightfully velvety texture. Fragrant, low growing.....\$1.00
- ANGELS MATEU, Pat. 174—A big colorful orange-coral rose for full sun, where its color stability is superb. The big buds and lovely fully double blossoms are scented richly like ripe blackberries mingled with rose perfume. An upright plant of medium height with shining glossy foliage. Very heavy blooming.....\$1.25
- BETTY UPRICHARD—A striking two-toned rose with backs of petals coppery carmine, reverse rich salmon pink. This fine rose in fairly cool gardens competes in

- beauty with the finest of the very new varieties. People with hot gardens also need it, for the vigorous plant does not sulk in the heat, but continues to grow. In hot gardens water well, and grow in some shade if possible. Tall.....\$1.00
- BRAZIER**—This is an unbelievably gorgeous rose of intense glowing orange-scarlet with yellow reverse, with a lovely long bud. The plant, which blooms with extreme freedom, needs to be put in shade, in which situation it is brilliantly satisfactory. It has been very cruelly treated by being put in full sun in most gardens, where the fully open bloom fades. Then the very ungrateful owner howls to high heaven instead of putting it where it obviously belongs. The hybridizers must feel like giving up when they produce a rose like this, only to have it condemned because it is mishandled. Low growing .....\$1.00
- CECILE WALTER**—This splendid rose grows and develops its bloom colors in full hot sun, a blessing for hot gardens. It has a remarkably long bud, opening to an informal blossom of soft coral pink, flushed copper, overcast with gold, much the colors that made Los Angeles so beloved in spite of its terrible blackspotting. Cecile Walter, on the contrary, is enormously resistant to blackspot. Medium.....\$1.00
- CHRISTOPHER STONE**—Nearly the perfect rose. Rich unfading scarlet crimson, with pointed bud of great beauty, and big delicately waved petals on the gorgeous blooms. It grows and opens its buds perfectly in any climate, with absolutely stable color in sun or shade. It is an unbelievably heavy bloomer, is sweetly fragrant, and is low enough in growth to make the finest kind of bedding or border rose. A border of Christopher Stone is a sight not easily forgotten. It is noted among its other virtues for keeping the fresh brilliance of its velvet petals until they drop. I have put an enormous amount of vigor into this variety.....\$1.00
- COLONEL CAMPBELL WATSON**—This pure pink rose has a really wonderful long pointed furling bud, which opens in any kind of weather and is practically impervious to thrips damage among other things. It is fadeless in sun, and unfurls with a gracious leisure that makes it a wonderful cut flower. The plant is extremely healthy, blackspot resistant, and of the medium height that fits so well into your garden picture.....\$1.50
- CRIMSON GLORY, Pat. 105**—A rose worthy of its lovely name, with a pointed bud opening to a big, fully double, high centered rich crimson bloom of pure velvet; it might have posed for all the pictures of the ideal rose down through the ages. Powerfully fragrant with richest damask perfume. Very heavy blooming and healthy, on a vigorous but low compact plant perfect for bedding. Absolutely no orders accepted for this rose after November 15, due to shortage.....\$1.25
- CONDESA DE SASTAGO**—Still the finest brilliant bicolor for general garden conditions, with ovoid buds and many petalled, very double blooms. Extremely vigorous and free of bloom, the most healthy and vigorous of the capucine bicolors. Medium. \$1.00
- DR. KIRK**—A remarkable new rose of coral-bronze shaded copper, with a beautiful pointed bud and a high centered bloom of finest form. Under some conditions this lovely rose attains almost the rich bronzy browns of an old tapestry overlaid on an intense glow of color. The colors will be finest in some shade. Medium height. \$1.25
- DUQUESA DE PENARANDA**—A fine big double rose of rich salmon apricot in cool weather, light salmon pink in heat. It makes a fine handsome upright growing bush with very profuse light green foliage. A fragrant, most desirable rose that grows lustily anywhere. Of medium height.....\$1.00
- EDITH MARY MEE**—A vivid rose of apricot-coral to Oriental red, of much the same coloring and form as the famous Charles P. Kilham, but much healthier and giving twice the bloom. Low of growth, and a splendid bedding as well as cutting variety. Its richest colors come consistently under coastal conditions, but it is beautiful anywhere .....\$1.00

- ETOILE DE HOLLANDE**—This remains one of the finest red roses of today, and is especially fine in the warmer sections. A large fragrant rich crimson rose of delightful form in both bud and bloom. Healthy, of medium height.....\$1.00
- EMMA WRIGHT**—A beautiful small rose with slender buds of pure soft orange held gracefully upright on the ends of slender firm stems. This opens to an orange rose of fine form and much grace. Delightful for corsages, buttonhole roses and flower arrangement, and a thoroughly satisfactory garden rose if it is put in part shade to keep its vivid color. Low growing, fragrant.....\$1.00
- GIRONA**—A uniquely lovely rose, possibly the most fragrant rose in existence under widely varied conditions, breathing forth the richest damask perfume. The always pointed buds are crimson and gold, unfolding with a butterfly effect into a lovely blossom with waved petals, of rich yellow tipped with rose. As the blossom ages the rose color first recedes, then extends over the petals, deepening day by day until they drop, seemingly as fresh as when the bud unfolded. The petals have a crystalline texture that adds to its beauty. Fully opened blossoms of Girona may be floated in bowls and kept for days in the house, always sweetly fragrant. A very healthy, strong growing, tall, upright plant that stands heavy bloom cutting, with foliage extending up to the neck of the bloom. To keep the richest colors grow Girona in some shade with plenty of water .....\$1.25
- GRAND DUCHESSE CHARLOTTE, P. R. R.**—A marvelous long slender pointed bud of coppery coral on an extremely vigorous plant. Purple-brown stems contrast strongly to dark green foliage. Enjoy this for your cut flower garden. Absolutely no orders accepted for this rose after December 15.....\$1.50
- HEINRICH WENDLAND**—A beautiful multicolored rose with a pointed, slow opening bud—the slowest opening of the high multicolors—with inside of petals crushed strawberry to coral, outside old gold. A healthy, bushy plant with very glossy foliage, most satisfactory in moderately cool sections of the country. Of medium height. The lightly fragrant bloom is fully double.....\$1.00
- JOYOUS CAVALIER**—A heavy blooming, strongly growing rose of true light spectrum red, fragrant and very stable in color. Dark glossy foliage. Tall.....\$1.00
- KAISERIN AUGUSTA VIKTORIA (K. A. V.)**—A beautifully formed white rose I class as a Tea, fully double, with a fine pointed bud and the delightful Tea fragrance. It has kept its great popularity since 1891, so it has had to be good. Of medium height, performing wonderfully in heat; a deservedly standard white garden rose. \$1.00
- KATHERINE PECHTOLD**—One of the loveliest of the orange roses, with just enough salmon underlay to make a beautiful warm color. Charming pointed buds open to blooms of finest form, delightfully fragrant, holding their color wonderfully. Of medium height.....\$1.25
- KOROVO**—A beautifully formed, long budded rose of warm apricot over pink. The slender lovely urn shaped buds, much like those of Picture but larger, unfurl into a fully double "rose shaped" rose of wonderful form even when widely opened, and deliciously fragrant. The colors deepen in heat, and the petal texture is resistant to both heat and thrips damage. This splendid rose, finest in hot climates, is rapidly becoming enormously popular. Medium height.....\$1.00
- LADY MANDEVILLE, Pat. 461**—A rose of excellent form, of an unusual soft apricot to yellow, with much richer glossy red-olive foliage even than its parent, Mrs. Sam McGredy. Perfectly healthy, very low growing, with a dainty fruit fragrance. The fully double bloom is slow opening, and able to open under a wide range of conditions. Colors are richest in some shade, or high humidity.....\$1.50
- LADY NUTTING**—A beautifully formed new rose with buds of light salmon which in

- hot weather acquire striking copper overtones. Fully double with perfectly formed blossoms, another fine rose for hot gardens. Medium height.....\$1.25
- LORNA—A rose of singular grace, beauty and delicacy, with a very long bud of the beloved Mme. Butterfly form, shaded warm flesh to light salmon, with outsides of petals peach pink. Extremely heavy of bloom, on a healthy plant, and fragrant. Of medium height.....\$1.00
- LUCIA ZULOAGA—A most unusual rose of velvety bronze-scarlet to lacquer red, with its beauty enhanced by glossy red-olive foliage. An entirely different decorative type of rose making most striking arrangements. Fragrant, of medium height.....\$1.00
- MAYOR BAKER—This deliciously perfumed rose has a pointed bud of raspberry-scarlet opening to an airy bloom of scarlet to terra cotta. The beautiful buds are produced on a vigorous upright plant with long smooth stems, making them a joy to cut. Beautiful at all times, the richest colors come when weather warms up. Very healthy, tall growing.....\$1.00
- McGREDY'S SUNSET, Pat. 317—An airy rose of richest yellow with waved petals edged with red, on a plant with glossy olive green foliage. This is another of the fine bicolor roses whose red tones are pulled out by lack of water. Grown in partial shade with plenty of water or where humidity is high it corresponds to its color description. Medium height.....\$1.25
- McGREDY'S WONDER—A notably heavy-blooming rose of soft orange with colorful overtones of rose and gold, producing consistently a beautifully pointed bud of finest form, opening into the loveliest of semi-double blossoms whose softly glowing hues are set off by bright red stamens tipped with heavy golden anthers. Stems are richly dark and smooth, in striking contrast to the beautiful bright blossoms and foliage of glossy bronzy green. Heavy of bloom for bedding, a constant display of color, and with fine stems for cutting also.....\$1.25
- MRS. PIERRE S. DUPONT—This beautiful coppery yellow rose when on my wonderfully strong plants far outperforms any other yellow rose today. The beautiful urn shaped buds held upright on the ends of the stems, opening to a rich yellow, deliciously fragrant bloom, assured the persistence of DuPont when it was on the former small plants which were characteristic of this variety. In addition it boasted very healthy dense rich foliage, and a notable resistance to thrips and other insects. On any kind of plant it tended to give a good quantity of bloom. I have propagated DuPont for many seasons, long enough to have made a perfectly astonishing improvement in plant quality, notably in vigor of growth and production of blooms. I have no hesitation in saying that DuPont on my powerful plants is by all odds the top yellow garden rose today. Low.....\$1.00
- MRS. SAM McGREDY—Long pointed scarlet-copper buds opening to a fully double high centered fragrant bloom of apricot to salmon pink according to weather conditions. A vigorously healthy plant with delightful red-olive foliage; very strong growing, though of medium height. This lovely rose shares popularity with President Hoover among the older multicolors.....\$1.00
- NARZISSE (P. R. R.)—This is possibly the finest warm-to-hot-weather rose put on the market in several years. The long pointed buds open to fully double blooms with every petal quilled, rolling back as perfectly as the most beautifully pictured rose. The color is usually a cream deepening to soft orange in the heart, although in some weathers it comes really yellow. On a very healthy, strong growing plant with long cutting stems. Positively no orders accepted for this rose after November 15.....\$2.00
- PICTURE—A rose of unique and charming grace both in bud and fully opened bloom. The slender urn shaped buds of warm salmon pink open into a completely double rose of perfect form with pointed petals, sweetly fragrant. The buds unfurl slowly and the

- open bloom is long lasting both on the bush and when cut. Extremely heavy blooming, this was once a wonderfully beautiful rose on a weak plant: my plants are enormously vigorous and strong growing. A real oddity about this rose is that with a thousand varieties of roses on view here, representing the finest the world has ever produced, nearly every one on viewing Picture exclaims, "Oh, what is that? Isn't it a picture?" as they do of no other rose. Its photographs never do it justice. Medium height. \$1.25
- PINK DAWN**—A wonderfully beautiful pure pink rose for the warmer, drier sections, on a tall strong growing plant, with a very fragrant long pointed bud and a high centered opening bloom. Long cutting stems.....\$1.00
- POINSETTA**—A long bud of clear scarlet unfading in sun, opening to a double bloom. A fine new red rose upright on good stems, healthy and vigorous, with clean glossy foliage. Of medium height. Possibly the best scarlet for the hot sections.....\$1.25
- PRESIDENT HOOVER**—An enormously popular multicolored rose, with a fine bud and a big handsome blossom in rich shades of orange flushed red. The glowing colors change to rose and cream shades in varying weathers. Spicily fragrant, on a tall strong plant that stands unlimited cutting of blooms. The buds and blossoms are held perfectly upright on fine stems. A big healthy foolproof bush.....\$1.00
- PRESIDENT MACIA**—A very different rose, of delicate shell pink with a deeper reverse to the petals. The graceful big bud opens into an unusually large bloom with airily waved petals, like a super-waterlily. This is a rose for warm to hot climates, and the bloom can stand unlimited sun. The bush is strong and vital, of splendid shape and clothed with large firm foliage. The blossoms also are notable for the splendid thick smooth substance of the petals. Delicately fragrant, a fine rose rapidly becoming known and much admired.....\$1.00
- PRESIDENT PLUMECOCQ**—An extremely heavy blooming rose of rich coppery buff that develops a red glow toward the center of the bloom with plenty of water and sun. The fine plant is very healthy, and blooms are very resistant to thrips. The buds, which are held firmly upright, are urn shaped. This is a rose that lasts wonderfully when cut. Of medium height, a fine reliable rose.....\$1.00
- PRINCESS MARINA**—A perfectly reliable rose in the Mrs. Sam McGredy colors, with a beautiful slender bud held absolutely upright on ends of fine cutting stems. Fragrant, not quite so double as Mrs. Sam, healthy, thrips resistant, performing wonderfully in hot gardens, and good anywhere. A fine bush for bedding also. Medium.....\$1.25
- QUEENSLAND BEAUTY**—A soft salmon pink sport of the excellent Golden Dawn, on the same splendid plant that grows and flourishes in difficult rose climates, making the sturdiest of bushes to produce a wealth of fine big buds and handsome very double blossoms. Sweetly Tea-scented, low in growth.....\$1.00
- SENATEUR POTIE**—Possibly the most vigorous orange rose, with handsome long buds, and a sweetly fragrant bloom. Color varies from true rich orange in shade to rich yellow tipped with orange in full sun. Very healthy, with buds held upright on the ends of fine strong stems. Colors are richest in full shade or coastal conditions. Medium .....\$1.50
- SIGNORA, Pat. 201**—A most satisfactory and reliable multicolored rose, with urn shaped buds and beautifully formed fully double open blooms. Predominant color is Mandarin red shading to an orange base. This splendid rose has the vigorous growth and long stems of Hoover, making it a fine cutting as well as bedding variety for background beds. Fragrant, tall, heavy blooming, healthy.....\$1.00
- SNOWBIRD**—One of the finest white roses, with garden qualities approaching perfection. The small pointed slender buds ARE perfection pure and simple, and unfurl slowly into very double, many petalled open blooms of purest white with delicious

- fragrance. Perfectly healthy, resistant to blackspot, mildew and thrips. The lovely blossoms are unaffected by heat. Grows anywhere. Low.....\$1.00
- SNOW WHITE** (Spanish name Buta. From P. Dot.)—A very double, exquisitely formed snowy rose with pointed bud and intense fragrance of richest damask, on a fine strong growing plant with long stems for cutting. This new rose, being both white and intensely fragrant, will need some protection from thrips.....\$1.50
- SOEUR THERESE**—A well known and very popular yellow rose with slender urn shaped buds, striped with red when the weather is humid or cool. Its hardy healthy vigorous plant is tall growing.....\$1.00
- TEMNO**—Still the best of the black-red roses for general garden use, with small dusky buds opening to a cupped double bloom of dark crimson tinged with black velvet. Damask fragrance. Low growing.....\$1.25
- TEXAS CENTENNIAL**, Pat. 162—Another Hoover sport of perfect form on the tall strong healthy Hoover bush. Enormously heavy blooming, thoroughly consistent in performance, deliciously fragrant; color ranges from rich raspberry to muted pinks. Tall. ....\$1.00
- THE DOCTOR**—Furling pointed buds of rich pure pink averaging 2½ inches in length, often three inches, intensely fragrant with the damask perfume, characterize this remarkable rose. The buds open to huge airy semi-double blooms of finest substance. My plants of The Doctor are very large and strong.....\$1.25
- TREASURE ISLAND**—Plants this year from my own budwood give the results supposed to be achieved by this deeper and richer child of Countess Vandal, with which it is otherwise identical. The pointed bud of coppery pink opens into a prize winning bloom of salmon pink with an orange base. The greater the heat and the more intense the light the deeper the colors. Tall.....\$1.25
- VICTORIA HARRINGTON**—A long budded ruby-crimson rose with intense damask fragrance, on an upright plant with long cutting stems. This beautiful rose does not blue in climates where bluing of even the most stable ruby-reds is often observed. A wonderfully rich red rose on a healthy plant. Tall.....\$1.00
- WALTER BENTLEY**—An exhibition rose of Oriental red-orange flushed scarlet, requiring much light to make its colors. Not a good garden variety: for shade in hot climates, full sun otherwise.....\$1.00

## STANDARDS OR TREE ROSES

**ROY HENNESSEY'S STANDARDS**, called tree roses by some, are absolutely unique among standards, as Hennessey bushes are unique among bush roses.

Ordinary tree roses are on wild stems, which draw up so little nourishment that the rose on top remains of small size unless very old and well established or of a very vigorous variety. These stems sucker badly, which further impairs growth of the rose head.

**HENNESSEY STANDARDS** are on hybridized, non-suckering, fully hardy stems, which take up so much food that the roses on top grow to unbelievable size, giving nearly twice the results given by even Hennessey bush roses of the same varieties.

My standards are so extremely vigorous that on them I can use lovely roses of normally small growing varieties, comparatively small even on my bushes, but on my standards giving truly enormous results. These standards are eagerly sought after by the rose exhibitor, for one, as the blossoms produced are even larger and finer than on my bushes.

Varieties are carefully chosen from the huge number of varieties I have available, for

their outstanding virtues on standards. All but two varieties which cannot be duplicated of their type are of the spreading or lateral growth so desirable for tree roses.

**TREE ROSES ARE MUCH HEALTHIER**, much less subject to mildew and black-spot, than the same varieties grown as bushes, for they are away from contamination of the ground, and air circulates freely through the branches. The hardy hybridized stems are pliable, so that in cold climates the tree may be bent to the ground and the head covered with earth in winter. All colors of roses listed are as nearly sunproof as any but plastic roses can be, for standards are nearly always grown in full sun.

Tree roses must be carefully boxed for shipment. The boxing and packing charge is \$1.50 for from one to three, 50c each for any above, in addition to the postage. There is no discount on standards, for they are remarkable values as quoted. All are twice-worked.

## SHORT STANDARDS

**NIGGER BOY**—The pointed dusky crimson velvet buds of this rose, buds that open to fully double blooms of intense crimson with a glowing scarlet underlay, are a fitting complement to the fine plant of this symmetrical border rose, its use in bush form. On a short tree stem this beautiful rose will make garden visitors open their eyes. The small perfect buds and blooms are clustered.....\$2.50

**TOPAZ**—This miniature rose, which is about the most charming little rascal in rose form that could be evolved, deepens the yellow of its buds in sun and heat to the topaz of its name. The miniature buds are of exhibition form, with long furling points, and open into completely double "baby exhibition roses" with quilled petals, every one a copy of perfection in miniature. The spreading little bush is just right for standards, a big bouquet on a stem.....\$2.50

## REGULATION HEIGHT STANDARDS

**ANGELS MATEU**—This richly fragrant orange-coral rose with its fine big fully double bloom set off by glossy foliage flaunts its beauty to even finer advantage when used as a tree rose. It holds its glowing color in full sun better than any of its sisters of these bright hues. A gorgeous standard, upright growing.....\$3.50

**CRIMSON GLORY**—Roses from a Hennessey standard of Crimson Glory will make the most hardened rose grower catch his breath, for the huge buds and blooms of richest crimson velvet are truly glorious. Richly fragrant with damask perfume and perfect for cutting, these blooms have enchanted thousands even from ordinary plants, and from my standards they are a revelation. On my standards it fairly outdoes its name .....\$3.50

**GOLDENEZ MAINZ**—The most glittering yellow H. T. rose under the greatest variety of conditions, and in addition the most sunproof among modern yellow rose bushes. A very heavy bloomer, so that a standard of this rose gives a constant shower of gold made even brighter by lovely glossy foliage.....\$3.50

**KARDINAL**—I have watched this beautiful rose with increasing admiration for several years. The velvety fully double bright scarlet-crimson blooms, deliciously fragrant, keep their wonderful color and excellent form on the bush for an astonishing length of time; the buds and blooms develop perfectly with finest color in practically any weather, when many fine red roses are looking very unhappy indeed.....\$4.00

**LADY MANDEVILLE**—A small healthy sturdy bush with glossy olive-red foliage, producing on the little bushes a most striking big pointed bud and a fully double rose of the finest exhibition form. The color of this new rose is an unusual soft apricot-to-yellow, that much desired color. On my standards the bush really goes to town, producing growth to match the size of the blooms. Fruit fragrance.....\$4.00

- PICTURE**—The slender dainty urn shaped buds and pointed petals of this perfectly formed, fully double rose have won it a permanent niche in the hearts of rose lovers. Of a warm salmon pink, its sweet fragrance coupled with its extremely heavy bloom adds to its charm and worth. The larger blossoms on the standards lose none of the especial grace and loveliness of this delightful rose.....\$3.50
- SARAH DARLEY**—A beautiful, perfectly formed fragrant bright yellow rose. We cannot supply the demand for the bushes in spite of its low growth. On my standards this fragrant healthy rose makes a big bush producing its lovely buds and blooms freely. ....\$4.00
- SENORA GARI**—A wonderfully formed long budded rose of deep soft orange. A heavy producer of its exotic buds and fully double open blooms. A wonderfully healthy orange rose of a growth and character ideal for tree rose use.....\$3.50
- SNOWBIRD**—A lovely outstandingly healthy white rose with slender furling ivory buds opening to sweetly fragrant fully double blooms of snowy white. It has nearly every good garden quality, and on my standards the increased growth adds notably to the worth of this most desirable white rose, which I class as a Tea.....\$4.00
- THE DOCTOR**—This breathtaking pure pink rose has had rose lovers in ecstasies since its introduction, though on ordinary plants it is a notably miserable grower. But the buds even on small plants are astounding; enormously long, perfectly pointed and breathing richest damask perfume, while the open flowers of waterlily form attain a diameter of six inches. Its pure bright color really holds in sun, and the unbelievable size attained on my standards will astonish you.....\$4.00

## SINGLE ROSES

"Single" roses have usually five or six petals, and "semi-double" roses ten or twelve petals. However, in the descriptions of those roses listed under Hybrid Teas, the term semi-double usually means up to or around twenty petals, the term thus being used with different meanings according to class of roses described.

- CECIL**—The finest yellow single rose, of intense color and extremely large size, with petals of open bloom tending to be quilled. When this rose appeared objections were made that it was entirely too large for a single rose! On a plant of medium height with bright glossy foliage. Cecil holds color splendidly.....\$1.00
- COLETTE CLEMENT**—A very large semi-double bloom of glowing coral orange, on a tall very vigorous plant with glossy foliage. In the hot sections plant in some shade and water well.....\$1.00
- DAINTY BESS**—For over a decade the most popular single rose, of shaded pinks with dainty frilled petals and striking maroon stamens. (See Climbing Roses also.) Of medium height.....\$1.00
- DAZLA**—An eye filling semi-double rose that's a riot of color. The open bloom has a glowing yellow center zone merging through shades of vivid orange to the outer zone of orange-coral flushed red. This startling rose is on a fine vigorous bush of medium height, with very healthy foliage.....\$1.00
- ETHEL JAMES**—A big airy single bloom of vivid orange flushed pink, on a bushy well foliated plant of medium height.....\$1.00
- HARVEST MOON**—An enormous single bloom of cream to ivory with richly contrasting orange-red anthers. Medium height.....\$1.00
- INNOCENCE**—This enchanting twelve petalled rose has a slender bud of delicate peach opening into a big snowy bloom centered with golden stamens. Medium height. \$1.00
- ISOBEL**—A very large single of delicate clear salmon pink, of splendid garden habits which make it undoubtedly the finest rose of its type and color. Very healthy, tall growing .....\$1.00

- I. ZINGARI—This odd name means "The Gypsies," and was given because the English cricket club of that name had as club colors the glowing scarlet-orange of this brilliant rose. Its rich colors are finest in some shade. Tall.....\$1.00
- KATHLEEN MILLS—A really marvelous new ten-petalled pink rose, with waving petals of heavy satin; delicate pink edged with wine-rose. Large as it grows in the garden, it possesses the further property of expanding enormously in size when cut and in water, and is deliciously fragrant. Medium height.....\$1.00
- KILLARNEY BRILLIANT—A very beautiful rose of sparkling pink with two rows of petals, having distinctive red anthers. This carries the cinnamon fragrance so unexpected and delightful in a rose. On a strong plant of medium height.....\$1.00
- KITCHENER OF KHARTOUM (K. of K.)—A very fragrant semi-double rose of dazzling scarlet on a vigorous but low branching bush. For long a heavily prize winning rose in England.....\$1.00
- LULU—This is deservedly the most popular and beloved small corsage and buttonhole rose. It has an enormously long, enchantingly slender furling bud of rich salmon pink with a yellow base, growing demurely upright on the end of the stem. This is a fine healthy bush of medium height blooming heavily and constantly.....\$1.25
- MME. VAN DE VOORDE—One of the finest and most popular roses for cutting, and a wonderful rose for garden display also, with a velvety scarlet semi-double bloom and the most graceful of slender pointed buds, richly fragrant, on long smooth stems. Most profuse of bloom, on an upright plant with healthy foliage. Tall.....\$1.00
- SUNDAY BEST—This brilliant rose will make observers open their eyes in astonishment if you use it rightly. It produces masses of very large single blooms of vivid crimson to carmine with a snowy white eye. It is good at all temperatures from forty to one hundred degrees, but the colors are of course deeper and richer in part shade, and with water and humidity. It is a semi-climber, growing about six feet in a season, and if pillared or grown as a fountain shaped specimen plant, either alone or among shrubbery, it is immensely striking. It is among the very earliest roses to bloom in spring, and gives forth a continual flood of bloom all season long. It is always perfectly healthy and dependable.....\$1.50
- VESUVIUS—The finest single crimson bush rose.....\$1.00

## SPECIAL DOZENS \$4.00

We are this season selling bundles containing at least twelve rose bushes for \$4.00. The bushes are our second grade plants, and average exactly as high in quality as the average top grade plant sold at full price. Naturally the quality is infinitely higher than many so-called top grade plants, and not to be compared with other second grade plants.

In each bundle is a balanced selection of reds, pinks, yellows, multicolors, bicolors, and those in the coppery and salmon tones. All are labeled with names of varieties.

These are Hennessey bushes as carefully bud-selected as are all the rest of our bushes. They simply did not grow as big in the field as our "Hennessey standard" rose plants, due to conditions of weather, drainage, etc. But the vitality-building process has been as carefully watched with them as with our big standard plants.

The bundles are put up when roses are put into the storage houses, so you cannot select the varieties in your bundle. However, I maintain a display and experimental garden of over 1000 varieties of roses for the exact purpose of avoiding the propagation of any duds.

There is no further discount on this offer, so if you order these bundles along with a selected list of our regular top-grade plants please calculate your allowed discount on

the total, MINUS the price of the special dozens, and then add in the bundle price or prices.

WE GUARANTEE that no rose grower will become disgusted with rose growing through ordering Hennessey special dozens of roses! My reputation is behind these just as much as it is behind our biggest plants.

## HYBRID POLYANTHAS

### BORDER ROSES AND ROSES FOR MASSING, ETC.

Cluster flowered polyanthas have numerous uses; as borders, massed groups and beds, for spotting among shrubbery, and last but not least for flower arrangements ranging all the way from the great handsome clusters of those such as Orange Triumph and Hythe Cluster to the miniature perfection of Etoile Luisante, Baby Alberic, etc. Among the roses listed on the following pages will also be found the majority of your corsage roses.

Most polyantha roses are designed for massed effect of color, or for spotting among shrubbery for a bright color note, and are effective only when massed, in groups of not less than three plants, and better, six.

**BABY ALBERIC**—The finest white double polyantha, with perfectly pointed snowy buds opening slowly into extremely lasting very double blossoms of show form in miniature.

This enormously heavy blooming rose with its foliage shinningly burnished is exquisite for borders, massing or cutting. Low.....\$1.00

**CECILE BRUNNER**—The always delightful little "sweetheart rose," with tiny furling inner shaped buds of soft salmon pink. Low growing.....\$1.00

**CINERARIA**—For those who love the color rose in the rose, thoroughly healthy polyantha of brilliant Rose Bengal.....\$1.00

**DAGMAR SPATH**—To date absolutely the finest white semi-double hybrid polyantha, with fluffy blooms opening with a pearly flush, turning purest snowy white. Absolutely constant of bloom, very healthy, growing anywhere. Medium.....\$1.00

**EUTIN**—Clusters of unfading crimson double blooms on a completely blackspot resistant plant very similar to that of Orange Triumph. On our lusty plants this grows tall enough to make a low hedge of glowing color in constant profusion. The long graceful bloom clusters are unusually delightful in flower arrangements, and are amazingly long lasting.....\$1.00

**FABVIER**—The crimson China, with an airily graceful habit of growth and entire disease resistance. The fluffy brilliant blooms hold color until the petals drop cleanly. Grows anywhere. Medium height.....\$1.25

**FOLKESTONE**—A fine semi-double red polyantha that in shade and moisture produces clusters of intense crimson buds of long graceful curling form. Very heavy blooming, this rose should be planted in some shade for finest color qualities. Medium.....\$1.00

**GARTENDIREKTOR OTTO LINNE**—Huge trusses of a beautiful pink, on a very healthy plant with glossy foliage. Early in spring and late in fall, or on the seacoast, this variety is the most spectacular polyantha.....\$1.00

**GRUSS AN AACHEN**—A fine old favorite with large fully double blossoms of pearly pink with yellow base and deeper rosy markings. It dates from 1901, and is finer than many modern polys. Medium.....\$1.00

**GRUSS AN TEPLITZ**—This vigorous rose, suited for a hedge or tall border backgrounding other plantings, is a splendid healthy rose in favor for many years for its virtues as well as its beauty. The fluffy double open blooms, sweetly fragrant, come in clusters of dark scarlet velvet on short branchlets. It blooms profusely with recurrent bloom.....\$1.00

**KAREN POULSEN**—The finest Poulsen polyantha, with large single blossoms of radiant scarlet-crimson in enormous trusses. Medium.....\$1.00

- LITTLE MISS MUFFETT**—Pointed buds, large for a polyantha, of soft pink opening to a three-inch bloom, on a vigorous healthy plant.....\$1.00
- MARGY**—Lowest growing crimson-scarlet poly, semi-double. The clear color has fine stability, and the upright plants grow always most neatly, so it is fitted for an actual trim border outlining the rose garden or perennial bed. Delicately fragrant.....\$1.00
- MARY GUTHRIE**—This dainty rose can be classed either as a single rose or a polyantha, with big waved unfading blooms of clear deep pink almost covering the plant during the almost constant blooming periods. Extremely healthy, this top border rose is the only pink polyantha to hold its beautiful color in sun.....\$1.00
- NIGGER BOY**—This marvelous polyantha has a low, compact densely foliated plant 18 to 20 inches high and as much through. This very healthy plant blooms continually with masses of pointed dusky buds and brilliant crimson blooms of perfect Hybrid Tea form and quality. It is the richest thing in the garden.....\$1.50
- ORANGE TRIUMPH**—This is not orange, but a clear gleaming coral; the bright clustered double blooms backed by burnished foliage make it enormously decorative, both in the garden and when cut. The graceful trusses combine in delightful flower arrangements. The plant is extremely healthy, compact in form, low growing.....\$1.00
- PERLE D'OR**—This is the tiny yellow rose often called the yellow Cecil Brunner. However, the pointed little buds are not a true yellow, but that color tinged with salmon pink. Low growing.....\$1.00
- POULSEN'S PINK**—This marvelous pink polyantha is only for cool, shady or coastal conditions, and is there unbelievably beautiful, with its varnished foliage and enormous quantities of soft salmon pink blooms with a yellow base. Medium.....\$1.00
- ROSENELFE**—This polyantha produces a cluster of slender long buds of true tea form on a long stem, of dainty pink richest in partial shade. The vigorous bushy plant is of medium height.....\$1.00
- SUNSHINE**—A low growing border rose of softest orange, with little fluffy very double blooms. This variety will scarcely grow in the sun, although in the shade it is marvelous.....\$1.00
- TOPAZ, Pat. 300**—One of the loveliest little border roses to appear in years, with pointed buds of yellow opening into the most perfect conceivable rose, perfection in miniature. This deepens the yellow of its buds in the sun and heat to the topaz of its name.....\$1.00

## CLIMBING ROSES

Climbing sports of bush varieties of roses usually are larger flowered and have better color than the bush roses from which they sported. In the descriptions below the prefix Cl. denotes that the rose in question is a sport of the bush of same name.

- AMERICAN PILLAR**—This famed rose blossoms with immense clusters of single rich carmine pink blooms with a white eye, on a strong growing plant with glossy leathery foliage. Extremely abundant bloom coming usually in late June, followed by red hips in Autumn.....\$1.00
- ALLEN'S GOLDEN CLIMBER**—A superb coppery yellow tea with pointed buds and fully double fragrant blooms; a magnificently large rose on a huge strong growing plant that needs to be allowed to ramble for a great length along a wall or fence. \$1.00
- BEAUTY OF GLAZENWOOD** (also called Fortune's Double Yellow)—One of the beautiful, ancient hybridized roses brought from China, wreathing itself in airy semi-double blooms of orange-yellow flaked red.....\$1.00
- BISHOP DARLINGTON**—This beautiful everblooming semi-climber offers a large semi-double bloom of cream to flesh pink with a yellow base, delicately fruit scented. \$1.00

- BLOOMFIELD COURAGE**—An extremely striking climber of very powerful growth, blooming in a great burst of small single blooms of richest dark crimson followed by an enormous crop of red berries.....\$1.00
- BLOOMFIELD DAINTY**—Pillar. A delicate single bloom of orange to yellow; it changes to a pearly pink as blossoms age. The unfurling blooms give an airy butterfly effect, and the varied lovely shades on the plant at one time make it a big bouquet. Constant bloom.....\$1.00
- CASCADIA**—A polyantha-type pillar rose of fairly small growth, that covers itself at blooming time with large trusses of single snowy white blooms, backed by glossy varnished foliage. Its effect is one of lacy beauty that intrigues all observers. In appearance, growth, and habit of bloom, in all but color, it is a twin of Nancy, below. \$1.00
- NANCY**—This delightful companion-piece to Cascadia repeats all the latter's traits and appearance except that it blooms with dark red blooms that are semi-double where Cascadia's are single. The same unusual lacy beauty is apparent. Nancy's recurrent blooms are freshest and more lasting in some shade. These two garden gems planted together make a lovely picture.....\$1.00
- CLIMBING AMERICAN BEAUTY**—A very vigorous healthy hardy climber of true American Beauty color. This heavily blooming rose with its fine pointed buds and perfectly double Tea blooms is not a sport of American Beauty but a hybrid with that rose. ....\$1.00
- CL. CECILE BRUNNER**—This climbing form of the delightful little "sweetheart rose" is a strong, indeed rampageous grower, producing buds and blooms considerably larger than the tiny miniatures of the bush form.....\$1.00
- CL. CHARLES P. KILHAM**—A fine recurrent tea flowered climber with much healthier foliage than the bush. The multicolored blossoms vary from deepest coral to salmon pink, on fine cutting stems.....\$1.00
- CL. DAINTY BESS**—A most popular climbing sport of the bush, for which see description on page 34. Healthy, recurrent.....\$1.00
- CL. ELVIRA ARAMAYO**—A gorgeous tea flowered climbing rose of brilliant flame that will be one of the most vivid roses in the garden possessing a little shade and fairly humid conditions.....\$1.00
- CL. ETOILE DE HOLLANDE**—One of the finest large flowered crimson climbing roses. Please see bush description. Rich fragrance.....\$1.00
- CL. GOLDEN DAWN**—A climbing sport of the well known bush rose, with big pale yellow buds and blooms.....\$1.00
- CL. MME. EDOUARD HERRIOT**—A large-flowered climber of coral paling to coppery salmon, the hardiest climber in this color, and one of the remarkable climbing roses that puts out an unbelievable burst of bloom in its initial bloom period and then blooms recurrently thereafter. Extremely good.....\$1.00
- CL. MME. JULES BOUCHE**—A very fine climbing sport of the splendid bush rose. This constant blooming climber produces a wealth of the beautiful furling urn shaped buds and graceful open blooms that have delighted rose lovers for a long time. Both buds and blossoms are wonderfully fragrant. The snowy blooms show a pearly pink flush in the center until the weather becomes very warm.....\$1.00
- CL. MRS. PIERRE S. DUPONT**—A wonderful climbing sport of one of the finest yellow roses (the best yellow rose on my plants). The climber blooms continuously, producing the same lovely coppery buds and blooms as the bush on fine cutting stems, but in larger size.....\$1.50

CL. MRS. SAM MCGREDY (Buisman, '37)—A fine climbing sport of the immensely popular Mrs. Sam McGredy. A beautiful, healthy, free blooming climber with its parent's lovely foliage.....\$1.50

\* \* \*

Groom your climbing roses of faded trusses and seed pods, and encourage in this way greatest recurrence of blooming periods.

\* \* \*

CL. TALISMAN—The climbing form of this widely known rose is much more satisfactory than the bush form, which I no longer propagate. A recurrent bloomer. \$1.00

CL. TREASURE ISLAND—This beautiful rose whose blooms deepen in color in heat gives recurrent blooms on fine cutting stems.....\$1.00

CHERUB—This enchanting rose with its huge trusses of beautifully pointed small buds opening to shaded salmon pink blooms with yellow undertones, makes an incredible display when established and has a very long blooming period.....\$1.00

CORALIE H. Wich.—Coral pink with very large, well formed buds and blooms that hold their color quite well. Nice glossy foliage.....\$1.00

DAYDREAM—A pillar rose with big airy semi-double blooms of pearly pink; a salmon flush if in partial shade. Fragrant.....\$1.00

DOUBLOONS, Pat. 152—This large-flowered coppery climbing rose can stand temperatures of 30 below zero!.....\$1.00

DR. ECKNER—This fine hybrid rugosa has long tea buds opening to the most graceful semi-double blooms imaginable, of coppery rose on a golden ground, fading to soft pink flushed cream. An extremely heavy bloomer, blooming from early spring to frost, deliciously fragrant with damask perfume, hardy and healthy.....\$1.25

DR. HUEY—A semi-double rose of dark, brilliant crimson-maroon with yellow anthers, holding color splendidly, with no bluing. Hardy.....\$1.00

ELEGANCE—A wonderful large flowered climber presenting big Tea rose buds and blooms of finest form and fragrance, of yellow paling to ivory white at petal edges. A very vigorous climber with big dark glossy foliage.....\$1.25

EVA (also called Skyrocket)—A bushy pillar rose growing to about eight feet, flowering in huge trusses of semi-double blossoms of rich carmine red. Constant blooming, extremely healthy, a superb hedge rose. Colors richest in some shade.....\$1.00

FELICITY ET PERPETUE (Semp.)—A very hardy white cluster, vigorous and extremely healthy. A most satisfactory ground cover variety. Very tractable.....\$1.00

FLASH, Pat. 396—Pillar. The lovely buds open to gleaming orange-scarlet blooms centered with rich golden anthers. Gorgeous.....\$1.00

GHISLANE DE FELIGONDE—R. Yellow buds opening to pale yellow blooms, in clusters of 10 to 20. This gives recurrent bloom from old wood, and as with nearly all strong growing roses, can be made by proper pruning into a huge bouquet. \$1.00

GLENN DALE—This climber wreathes itself with great clusters of slender spiraling buds of dreamy grace. They open to charming ivory blossoms sweetly scented. Very healthy. ....\$1.00

GOLDEN DREAM—H. Rugosa. A splendidly hardy everblooming rose with long golden buds flushed with red on outer petals. A very healthy, profusely blooming rose, recurrent, fragrant.....\$1.00

GOLDEN GLOW, Pat. 263—A hardy Brownell climber with brilliant cadmium-yellow buds, perfectly pointed, slender and dainty, opening into double fluffy blooms. One of the most brilliantly yellow climbers on the market, vigorous and healthy, with glossy dark foliage.....\$1.50

- GOLDEN KING**—H. Rugosa. Another truly everblooming pale golden rose with pointed buds of yellow striped red. The hardiest everblooming yellow climber in existence, fragrant and lovely, a dimorphous sport of Dr. Eckner, which see.....\$1.00
- HAMBURG**—This is a marvelous pillar, which is our designation for those climbers not needing a forty-acre lot to ramble around in—in other words, a decently restrained grower. It blooms consistently through the season with trusses of semi-double open blooms with golden anthers, of brilliant crimson unfading in sun and heat, and extremely long lasting on the bush and when cut.....\$1.00
- HARMONY**—One of our finest climbers, producing at its first flowering enormous masses of big double high centered Hybrid Tea buds and blooms on fine long stems for cutting, of a warm shaded salmon pink with yellow base, almost fadeless in sun. This splendid rose then blooms recurrently throughout the season. Very healthy. Because of its heavy bloom the first year, it will climb slowly, as roses cannot climb rapidly and yet bloom heavily their first season.....\$1.25
- KITTY KININMONTH**—Great big unfading rich pink blossoms that unfold into the semblance of huge water lilies. This beautiful climber, which is very healthy, blooms continually from old wood, and is deliciously fragrant. Buds resemble those of The Doctor .....\$1.00
- LE REVE**—Intense yellow semi-double, very strong climber. Subject to blackspot under some conditions. Hardy.....\$1.00
- LOVE**—A lovely new climbing rose of moderate growth, presenting recurrently the loveliest imaginable buds, long, slender, richly crimson and gloriously fragrant, opening into beautiful blooms that keep their rich color in sun. Almost thornless.....\$1.50
- MARY HICKS**—This rambler flowered climber of deep scarlet to rose is extraordinarily fine. On established plants it puts out such a mass of huge glorious fragrant trusses from top to bottom that the foliage can scarcely be seen, and then continues to bloom recurrently the rest of the season! It is perfectly healthy, with absolutely no tendency to mildew. If put in some shade the deepest and richest color is kept longer.....\$1.25
- MARY McHUTCHEON**—Huge trusses of semi-double, fragrant crimson bloom, the largest trusses of any crimson climber. A very vigorous rose, a climbing polyantha, not a rambler.....\$1.00
- MARY WALLACE**—A very strong growing healthy climber with soft pink sharply pointed buds invariably well shaped, and double tea blossoms. Recurrent bloom all season after the first big burst. If this is not pruned too severely the blossoms come singly on fine long cutting stems.....\$1.00
- MISS MARION MANIFOLD**—A vigorous climbing H. P. with big rich very double crimson blooms holding their color splendidly. A very hardy climbing rose of extreme health. ....\$1.00
- MME. GREGOIRE STAECHELIN** (Spanish Beauty)—Beautiful slender buds opening to big graceful blooms of delicate pink flushed crimson on backs of petals. The sweetly fragrant waved blossoms are followed by a crop of huge decorative pear shaped fruits for winter garden decoration.....\$1.00
- MME. SANCY DE PARABERE**—The thornless rose of over a hundred years ago, very healthy and giving an enormous quantity of bright pink semi-double blooms.....\$1.00
- PAUL'S LEMON PILLAR**—Produces absolutely enormous long buds and high centered exhibition blooms of lemon to cream. Very fragrant, on long stems for cutting. \$1.00
- PAUL'S SCARLET CLIMBER**—This semi-double scarlet rose adorns too many fences and telephone poles throughout the country, as well as gardens, to need description. However, my plants will give complete bloom recurrence from all ends of flowering

- wood, from plants established three years, making them into a Blaze that really recurs .....\$1.25
- PAX**—An everblooming climber producing intensely fragrant semi-double blooms of pure white. The buds are long and very slender, and this with its continual bloom makes it an ideal plant to keep for corsage and buttonhole roses. Very healthy. \$1.00
- REVEIL DIJONNAIS**—One of the most startlingly brilliant roses on our entire list. Its pointed buds of rich gold tipped with bright scarlet open into big waved semi-double blooms with a wide center zone of deep yellow, and outer half of petals scarlet. In intense sun the colors are pale rose and gold. This beautiful, completely everblooming climber is to be used as a spectacular pillar or a specimen plant grown fountainwise, not against a wall.....\$1.00
- ROBINETTE**—The heaviest blooming rambler type rose in existence, a treasure for those who are not overcome by the color rose in the rose. An amaranth-red single bloom, the first year on the market for this rose. Sent to me by Ralph Moore of California, I discovered that this has the remarkable quality of being completely blackspot resistant, and hardy. Glossy foliage; the enormous bloom crop is followed by tremendous quantities of tiny bright red seed pods. It is almost thornless.....\$1.00
- ROYAL SCARLET**—Of somewhat the type of Paul's Scarlet, but smaller and more double blossoms of much richer and brighter hue. The unfading blossoms are enormously long lasting, both on the plant and when cut, and the blooming season is very long. ....\$1.00
- SANDERS WHITE RAMBLER**—Established plants of this bloom with great clusters of pure snowy white fragrant rambler blossoms.....\$1.00
- SCHOENER'S MUSK**—This glorious white climbing rose is one of the two great achievements of Father Schoener, and is outstanding. I assume that I am the only one to preserve it in commerce, for it does not appear in Modern Roses II. The gigantic pillar in my display garden makes great trusses, often two feet long, of snowy double fragrant rambler blooms. It is perfectly healthy, and glorifies many gardens, "in existence" or not.....\$1.25
- SCHOENER'S NUTKANA**—This rose makes a wonderful pillar or specimen plant, blooming in a tremendous cloud of rich pink single blossoms often five inches across. The arching canes, easily trained anywhere, are almost thornless.....\$1.00
- SILVER MOON**—A very vigorous climber with glossy foliage, a semi-double white bloom of large size, delicately fragrant. This climber is capable of covering a great deal of space.....\$1.00
- SOUVENIR DE CLAUDIUS DENOYEL**—An unsurpassed rose for the shade, blooming continuously with long perfect intensely fragrant buds of richest crimson, opening into perfect big tea rose blooms on long stems for cutting. This splendid perfectly healthy climber is inclined to climb slowly in full sun.....\$1.00
- SUNDAY BEST**—A flauntingly brilliant pillar blooming heavily and constantly all season from earliest spring to frost, with huge single blooms of rich carmine with a white eye. In some shade this is pure crimson, and is always beautiful. Enormously healthy and hardy, and good anywhere, at any time.....\$1.00
- SUNNY SOUTH**—Pillar. Pointed soft pink buds opening to delicate semi-double blooms continually produced. Fragrant.....\$1.00
- TAUSENDCHOEN**—A supremely healthy rambler with clusters of cupped fragrant blooms of mingled pink and white. The name means "Thousand Beauties," and although this dates from '06, it is still a very beautiful and satisfactory rose that can give cards and spades to many expensive patented moderns.....\$1.00
- THELMA**—Clusters of large semi-double salmon-flesh blooms on a vigorous plant. \$1.00

- VIOLETTE**—A very strong growing rambler blooming in clusters of tiny very double blooms of true rich violet, no off tint.....\$1.00
- WHITE BANKSIA**—Clusters of very small fluffy double blooms scented like violets, on a strong growing climbing plant.....\$1.00
- ZEPHIRINE DROUHIN**—A practically thornless rose grown and much valued since 1868. It is very hardy, and blooms recurrently all season with long buds of clearest rose color opening into fully double high centered blooms of the same bright fadeless color. Deliciously fragrant, and drops its lovely petals cleanly.....\$1.00

## TEA AND CHINA ROSES

The exquisitely graceful Tea Roses, brought originally from China, have given the long buds and general grace to the modern Hybrid Tea, which is broadly speaking a blend of Tea and Hybrid Perpetual. Therefore in Tea roses you obtain perfection of grace and form, this applying to all but a very few extremely double sports of Tea roses, such as The Bride, Homere, etc.

Tea roses need first of all some shade, to keep their delicate but often very vivid colors, thus they fit naturally into SHADY gardens. They are not nearly so tender as is generally supposed and will grow far north of their natural habitat in the U. S., which is generally supposed to be confined to those states below the Mason-Dixon line. I have a row of Teas 275 feet long, none of which have ever been lost from cold.

Let your Teas build up into large bushes, merely thinning them as would be done in competently pruning a tree, until they have reached the size where they can produce the fine large beautiful blossoms of which they are capable, blooms rivaling and exceeding scores of expensive modern Hybrid Teas, and all deliciously scented with rich rose perfume mingled with the odor of sweet tea.

**ALEXANDER HILL GRAY**—Often called the Yellow Maman Cochet, has a large extremely fragrant bloom of deep lemon yellow and the usual smooth tea wood and delightful smooth foliage.....\$1.00

**BLANCHE MESSIGNY**—A gorgeous late Tea introduction, with huge very double high centered blooms of nankeen to creamy yellow, deliciously fragrant, on a fine strong growing vigorous bush.....\$1.00

**BON SILENE**—A splendid Tea dating from 1835, a sweetly fragrant bloom of rosy crimson, with the most beautiful form both in bud and bloom.....\$1.00

**CHINESE PINK** (Common China)—An always-blooming rose with delightful slender buds and fluffy blooms of clear pink. This has the blooms coming on short branchlets. It will grow anywhere, though the color is perhaps loveliest in some shade. The history of this rose no doubt dates back several thousand years, adding to its interest. Medium .....\$1.00

**COMPESSE DU CAYLA**—A delightful China hybrid of graceful symmetrical growth, and slender vivid buds of nasturtium red flushed orange. It is most healthy, ALWAYS in bloom, and grows anywhere. Medium.....\$1.00

**DUCHESSE DE BRABANT**—A large double well formed Tea of soft rosy pink deepening to bright rose. This delightful Tea was originated in 1857. Delicately fragrant. \$1.00

**GRACE DARLING**—A Tea rose of marvelous form in bud and bloom, of exquisite pink. A very double, high centered rose, very sweetly fragrant.....\$1.00

**HOMERE**—A thoroughly distinctive, exceedingly double fluffy cupped bloom, deliciously fragrant, of pink with flesh-white center. On a very vigorous plant. From 1858 .....\$1.00

- LADY HILLINGDON**—A comparatively modern Tea which while retaining the charming Tea growth, etc., is as hardy as many Hybrid Teas. A very long graceful pointed bud of deep apricot yellow, orange at times when weather is fairly cool and damp. Fragrant .....\$1.00
- MAMAN COCHET**—A delightful Tea rose well known and greatly loved, dating from 1893, with a long bud and a high-centered bloom of pale pink deepening in the center. Large dark foliage, and a fairly vigorous plant.....\$1.00
- MARIE VAN HOUTTE**—From 1871, a large double high centered bloom of blended pale yellow, pearl and pink. Rich green leathery foliage. Sweetly Tea scented; an indispensable in the Tea garden.....\$1.00
- MME. ALFRED SCHISSELE**—A beautiful modern Tea of salmon to copper with lovely bronzy foliage. Delightfully fragrant with the true Tea sweetness. It keeps its lovely colors wonderfully and seems to stand sun better than most Teas.....\$1.00
- MRS. DUNLOP BEST**—Another lovely modern Tea of soft reddish orange with a very long pointed bud and a fully double bloom. A very fragrant rose on a strong stem, with glossy bronzy foliage, and vigorous in growth.....\$1.00
- MUTABILIS (Rosa Chinensis Mutabilis)**—A perfectly amazing and delightful thing of exotic fairy beauty; the two-inch blossoms, single and dainty, open sulphur yellow, changing rapidly then to orange, later red, and finally to crimson, so that you have this unbelievable variation, all fresh and gay, on one plant. And the plant itself is lovely, low and graceful. Grows anywhere.....\$1.50
- PAPA GONTIER**—A two toned rose with a lovely furling bud, bright pink with a carmine reverse.....\$1.00
- PINK HERMOSA**—This is the old "pink monthly" you remember from yesterday, giving recurrent bloom all season long.....\$1.00
- RAINBOW**—Something entirely different; a striped Tea, coming in dainty stripes of red and white, or pink and white according to conditions. This is everblooming as are all Teas, making it the only everblooming red and white striped rose.....\$1.00
- SOUV. DE MME. BOULLET**—One of the loveliest orange roses, with an enormously long pointed bud, opening to a large finely-formed bloom. This profits by some shade, being a Tea, but is extremely vigorous. Very healthy and free blooming. Splendid. ....\$1.25
- THE BRIDE**—A very double Tea rose dating from 1885, with a pearly pink tinge to its white petals, sweetly fragrant.....\$1.00
- THE BRIDESMAID**—Another very double Tea rose, this bloom flushed more deeply with rosy pink, deliciously tea-scented.....\$1.00
- VIVIAN MORELLE**—A graceful light yellow Tea on a medium sized plant.....\$1.00
- VRIDIFLORA (Rosa Viridiflora)**—A green China, sometimes called R. Monstrosa—a green bloom of about the usual China size and type; a very unsatisfactory rose in my estimation! .....\$1.00
- WHITE MAMAN COCHET**—A beautiful white Tea, with a beautiful big bud and a fully double high centered bloom produced profusely on vigorous plants of medium height. Sweetly tea scented, this lovely white rose has been overlooked only because plants ordinarily produced have been poor.....\$1.00

## LAWRANCEANAS

We offer only two of the extremely tiny fairylike roses, with buds incredibly minute, so tiny they are fitted for arrangement in vases only one inch high, and yet of perfect rose

form. There are quite a few of these dainty things in commerce, but because of general foliage weaknesses we propagate only two, the healthiest of these very tiny roses.

**ROSA ROULETTI**—Of rich pink, blooming constantly and heavily on a wee plant that starts to bloom when it is about two inches high, and which reaches a maximum height of about six inches. Rouletti is perfectly fitted for rock gardens and for most unusual and satisfactory edgings for the rose bed or perennial border.....\$0.50

**OAKINGTON RUBY**—Ruby red, with blooms a trifle larger than Rouletti, blooming heavily and constantly; this makes a "big" bush about ten inches high and as much through, compact and graceful.....\$ .60

## HYBRID PERPETUALS AND OLD ROSES

Rose growers in cold difficult rose climates need hybrid perpetuals and can use many of them to greatest advantage. It is true that the average Hybrid Tea rose can be grown in very cold climates if it is hilled up in winter with earth to the height of eight inches or a foot, and the mound kept frozen all winter. However, the hardy hybrid perpetuals need of course less care in general, and some of them produce blooms of the finest Hybrid Tea quality.

**AMERICAN BEAUTY**—I propagate this famous rose for the sentiment connected with it, and for the intense rich fragrance. However, only under greenhouse conditions is it the wonderful rose of which the name calls up pictures. Plant it in partial shade, please .....\$0.75

**ANNA DES DIESBACH**—This big exceedingly fragrant deep pink rose was long called Gloire de Paris. Dating from 1858, this tall growing rose is a splendid producer of richly sweet blooms. The finest, healthiest pink H. P.....\$0.75

**FRAU KARL DRUSCHKI**—This snowy white rose of perfect form yields its popularity very slowly to modern white roses. Extremely profuse of bloom, this very tall vigorous rose should not be planted among lower H. T.'s and then cut back sharply, but given a location where it can grow big to give the biggest quantity of big blooms.....\$0.75

**GEANT DES BATAILLES**—The famous old Giant of Battles from 1846, a great big handsome fully petalled deep red rose held upright on the stem ends, blooming constantly on a fine hardy tall plant.....\$0.75

**HENRY NEVARD**—A splendid fragrant deep crimson rose with lovely Tea buds, and a fine bushy heavily foliated symmetrical plant, blooming steadily and heavily all season, growing anywhere.....\$0.75

**JOHN RUSSELL**—A big bud and a large crimson bloom with darker shadings, very fragrant and blooming practically continuously.....\$0.75

**MME. ALBERT BARBIER**—This is the so-called yellow Hybrid Perpetual. At times the color is a creamy buff shading to copper. Very nice long pointed buds, produced continuously all season.....\$0.75

**MRS. HAROLD BROOKS**—This good rose looks and acts like a H. T., although it has much more vigor and is hardier. Really a superb rose with beautifully formed pointed buds and charming blooms of deep pink that darken to red in the fall. Blooms are on long stems for cutting, fragrant.....\$1.00

**MRS. JOHN LAING**—This splendid H. P. dating from 1887 is a pink rose of fine form, extremely fragrant. Please remember that the Hybrid Perpetual form is in general fuller and much more heavily petalled than that of the Hybrid Tea, so fine H. P. form is not Tea rose form, but has a charm all its own. Medium.....\$0.75

**OSKAR CORDEL**—This from 1898, a fine big husky pink rose on a thoroughly healthy plant. Intensely fragrant. Medium.....\$0.75

- PAUL NEYRON**—Since its introduction in 1869 this has been the largest rose known. Very double, ranging from pink to rose red, with fine damask fragrance. A tall, vigorous grower.....\$0.75
- PINK MOSS**—Even though I have secured the finest of the Pink Mosses, I advise that the mosses be bought only for the sentiment and tradition surrounding them, for in beauty of bloom they usually make no appeal to the eye accustomed to the wonderful modern roses. Low growing.....\$0.75
- PRINCE CAMILLE DE ROHAN**—The black-red H. P. which you remember so well from childhood days, velvety and fragrant.....\$0.75
- PINK DAMASK**—I have not been able to identify this rose; however, in hot weather it is the finest of the old pink roses, with perfect form. I received a shock on finding the rose was red during this cool spring.....\$0.75
- RED MOSS**—This, the finest red moss rose procurable, is still not advised to be bought for beauty of bloom, but only for sentiment. It is not to be called red by any eye accustomed to modern red roses. Low growing.....\$0.75
- REINE DES VIOLETTES**—The big blooms of clear lavender-violet, beautifully shaded and blended, come in fragrant profusion on a perfectly healthy, hardy plant.....\$1.00
- ROGER LAMBELIN**—A remarkable novelty, a maroon rose with fluffy waved petals, each petal of which is margined with a line of ivory white, which sometimes streaks the petals also. The petals as well as being waved have the edges imbricated and picoted, making the ivory lines delightfully prominent. This is a tall vigorous bush, blooming very freely, so the remarkable blossoms may be heavily cut for flower arrangements. My plants of this thoroughly unusual rose are now completely recurrent. \$1.00
- ROSA MUNDI (R. Gallica Versicolor)**—The striped Gallica, with a huge flat semi-double bloom of white or pale pink, striped red to dark rose. Some petals will also come all white, others all red, some half white and half red, many evenly striped. (This is not York and Lancaster.) By planting a budded, not an own-root plant (which suckers), keeping the union high and disbudding, this famous rose produces such fine large blossoms it easily wins in the single-semi-double classes in shows in competition with the finest modern roses. Medium height.....\$1.00
- S. M. GUSTAVE V.**—A comparatively new H. P. of Hybrid Tea form, with a long pointed bud of brilliant pink opening into a big semi-double blossom of unusual charm. Very fragrant. Medium.....\$0.75
- ULRICH BRUNNER**—A very famous, richly fragrant thornless cherry red rose, for decades the greenhouse cut rose supreme. Tall.....\$0.75
- UNIQUE**—This fine white Provence dating from 1778 is a fragrant pure white rose, very difficult to secure.....\$0.75

## RUGOSAS AND HYBRIDS

- AMELIE GRAVERAUX**—A large very double deep crimson bloom, exceedingly fragrant. Graveraux is the finest crimson large bush rose, either H. P. or H. Rugosa; the big rich blooms recur all season, set off by large dark foliage. Very vigorous. \$0.75
- BLANC DOUBLE DE COUBERT**—Fragrant semi-double snow white blooms that come continually all season. Sets huge orange seed pods for garden decoration when blooms are gone.....\$0.75
- CONRAD F. MEYER**—Fragrant double silvery pink blooms coming all the season. Extremely vigorous, making a large plant.....\$0.75
- HANSA**—Great fragrant frilly blooms of rich purple coming continually. This sets huge

- red fruits which appear along with the blossoms, an exotic color combination to make anyone gasp!.....\$0.75
- PINK GROOTENDORST**—A very unusual Rugosa Hybrid with clusters of salmon pink blooms resembling almost exactly pink carnations. The blooms, which are continuous and profuse, have when cut most remarkable lasting quality. To keep the clearest colors plant this in some shade. This is a sport of the Red Grootendorst; it has largely supplanted it in popularity.....\$0.75
- ROSE A PARFUM DE L'HAY**—This H. R. has a very large full blossom of deepest crimson, intensely fragrant. A very vigorous bush, in bloom freely and continuously if seed heps are removed. A situation in shade keeps the finest color.....\$1.00
- RUGOSA ALBA PLENA**—This has medium sized double blooms of the same icy purity of hue as Alba, and as fragrant. This delightful shrub produces red fruits which intermingle with the shining foliage and glistening blooms in most remarkable fashion. Decidedly something different.....\$1.00
- TURKES RUGOSA SAMLING**—A fine everblooming Rugosa Hybrid with large semi-double blooms of salmon pink with a yellow base. This makes a vigorous handsome bush about four feet tall.....\$1.00

## ROSE PLANTING INSTRUCTIONS

**CUT NO ROOTS!**

**LEAVE ALL ROOTS ON.**

**CUT NO ROOTS!**

Plant your roses as soon as received, providing the ground is not frozen too hard to receive them. Hard frozen ground is the only reason for not planting roses. The bushes do not mind cold or wet.

When you open the bundle see that roots are kept moist. Do not expose them to drying winds or sun for a moment. Keep roots in a bucket of water during planting operations. Should the roses seem to be dried out through shipping delay soak them roots and tops in water for 72 hours. They may die if planted when they are dried out.

Put no manure, trash or fertilizer in hole where bush is planted. It may cause root canker or burn the roots. Put only clean soil or subsoil on all sides of roots. This is **VERY IMPORTANT**. Do not ignore it. Never plant new rose bushes in soil from which old roses have been removed. Always change soil from a bed of annuals or similar source.

A **CONE OF SOIL** must be made under the center of each plant, where the roots spread downward in all directions, to avoid an air pocket. Do not put your bushes in a flat trench or hole and try to force the center flat against the soil without this support. In planting make the hole or trench large and deep enough to accommodate all roots when spread out and down at an angle of 30 degrees. Plant the union of rose and understock well above soil level. The **HIGHER THE UNION** the healthier and longer living your rose will be.

**TEN EXTRA MINUTES** spent in planting each bush **PROPERLY** will give you enormously greater results in years to come. The big roots on my plants will work miracles if allowed to.

With your bush placed work soil among roots, gradually firming it down until the hole is nearly full. Then trample firmly over your now well covered roots until you could not possibly pull up the bush with your hands. If you are planting in mud omit the tramping, but tamp soil firmly from time to time.

Now fill the remainder of the hole with water, even though you are planting in mud, to carry earth down into air pockets that may be left and would cause roots in such pockets to decay instead of growing. Finish with a final layer of loose soil.

If you have received bushes having more than four or five canes, thin out the surplus canes, allowing no more than above number on a newly planted bush. Remove with a clean cut at base of the plant, and protect all wounds with tree paint or emulsified asphalt.

**HILLING:** All canes are to be completely covered with soil after the bush is planted, either in winter or spring. This is to prevent the canes drying out from dry cold, heat or drying winds before the roots have a chance to take hold. **SPRING PLANTING** will possibly be a total failure unless the bushes are thus hilled, as spring conditions are ideal for drying out the canes.

Even small city lots provide enough garden space in the vast majority of cases to permit of soil being taken from a bed of annuals, etc., for temporary use in the rose garden. Always discard the top layer of trash by skimming it off with a shovel, and **HILL YOUR BUSHES WITH THIS CLEAN SOIL.** Do not hill with soil contaminated by old rose material.

Uncover your bushes gradually in spring, exposing only a portion of the canes at one time, so the new growth can harden gradually.

## AMERICAN ROSE SOCIETY

Every rose grower, no matter how small his rose garden, will be greatly profited by a membership in the American Rose Society. Send in your \$3.50 check today to Box 687, Harrisburg, Penna. For the yearly dues of \$3.50 you will receive:

1. The Rose Magazine, issued six times a year, containing articles written by members on their rose experience, which means articles written by YOU on your rose garden.

2. **THE AMERICAN ROSE ANNUAL**, issued every year, containing an average of 250 pages of the newest and liveliest discussions written on every phase of rose growing throughout the United States and foreign countries. These articles are written both by the best known rose experts in the country, and by the rose amateur, even the rose novice, who has something of interest to contribute. The Annual is always handsomely illustrated with color plates of new roses and halftones of places and figures of interest in the rose world. This publication sells for \$3.50 to non-members; you receive it with your \$3.50 membership fee.

## SPECIES ROSES

Species roses are, accurately, original wild roses. The great majority of roses listed below are wild roses from widely different parts of the world. Some, however, are obviously hybridized roses which have been classed as species because they come mostly true from seed. Examples of these are R. Damascena Trigtinpetala, and Harison's Yellow. However, all double roses are hybridized roses even though their origin is lost in antiquity.

Species roses are for the most part very hardy, and their bloom crops are followed by crops of fruit, mostly brightly colored; the most common colors are red, orange and yellow, although some produce fruits of black and brown. The fruits or hips are usually produced in great profusion and remain on the bushes for months, adding a bright note to the winter garden.

Most species roses become too large to be used in the small garden, but are used in woodland corners of the large garden, while those of more discreet growth make beautiful pillars, fountains and specimen plants in smaller gardens.

**AUSTRIAN COPPER**—No hybrid rose to date produced has quite the brilliant startling glowing color possessed by this species. It is a remarkable coppery scarlet, with the petals backed with gold, making each large single blossom shine almost like a light. Six to eight feet.....\$1.00

- AUSTRIAN YELLOW—A single rose of rich clear bright yellow. This is the famous Foetida to whose influence is due the amazing multicolors of the modern Hybrid Tea roses. The most brilliant of all yellow roses. Four to six feet tall.....\$1.00
- R. BRACTEATA—The McCartney rose, with large single shining snowy blossoms and glossy foliage. A prostrate bank cover giving blooms continually all season long. \$1.00
- R. DAMASCENA TRIGENTIPETALA—The 30-petalled Rose of Damascus, also called Kazanlik and the Mission rose. A large fully double bright pink rose of intense fragrance, long used for commercial production of attar of roses in the Balkins.....\$1.00
- R. FELIPE—At blooming time completely covered with trusses of small white single blooms followed by similar trusses of glowing red berries. Grows eight to ten feet tall. ....\$1.00
- R. HELENÆ—One-inch white blooms freely produced in trusses. A very hardy species of strong climbing growth. Eight to twelve feet.....\$1.00
- HARISON'S YELLOW—The hardy bright yellow rose so commonly found flourishing neglected in old fashioned gardens throughout the entire United States. Fluffy double blooms of intense clear unfading brilliant yellow. Grows about four feet tall.....\$1.00
- R. HILLERI—A remarkable cross of Moyesii and Wilmottiae, with deep red single blooms with piquant cinnamon fragrance. The big velvety-appearing blooms studded over the large, gracefully arching plant are rarely beautiful among the dark green foliage; you have to see it to realize fully what an exotic shrub it is. The striking blooms are succeeded by huge bottle shaped fruits turning deeply red towards fall, for winter garden ornaments. Very good in shade. Eight to ten feet tall.....\$1.25
- R. HUGONIS—The lovely Golden Rose of China, with soft yellow single blooms springing from every side of the graceful arching canes, throughout their entire length. The fine fernlike foliage makes a beautiful decorative plant at all times.....\$1.00
- R. LESCHINAULT—Evergreen foliage, and enchanting big milky blooms followed by red fruits. Extremely healthy, and one of the most obligingly tractable of any species, lending itself to training wherever desired, with canes eight to twelve feet long. \$1.00
- LADY PENZANCE—Single blooms of deep coppery yellow on an attractive plant that may be kept discreetly to four feet or trained as a semi-climber up to 8 feet tall. \$1.00
- LORD PENZANCE—Single salmon blooms on a plant of the same type as that of Lady Penzance. ....\$1.00
- R. MACRANTHA—One of the loveliest of the species, a trailing rose with soft pink blooms, which change to pearly white in the sun, or keep their clear hues in partial shade. ....\$1.00
- R. MICROPHYLLA—Renamed R. Roxburghi, the Japanese burr rose, with single pink blooms arising uniquely from a burr which supports the base of the buds, so that they resemble Japanese lanterns!.....\$1.00
- R. MOSCHATA FLORIBUNDA—Small dainty white flowers in big trusses. Grows eight to twelve feet high.....\$1.00
- R. MOSCHATA ALBA—A cross of Moschata and R. Gallica, having larger white blossoms than Floribunda. Eight to twelve feet.....\$1.00
- NEVADA—Words can scarcely do justice to this beautiful sub-species. In fact, it can scarcely be appreciated unless one sees it or sees it properly pictured, as in my rose book. In color it is cream to flesh according to weather, with semi-double blooms produced all season long if seed pods are picked off. This rose belongs in shade, and under very cool and humid conditions the blossoms are extremely large and fine .....\$1.00

- OMIENSIS PTERACANTHA—This is a remarkable and most unusual rose, with finely divided foliage of a delicate fernlike character, enormously decorative in itself. The slender canes are covered with huge translucent winglike thorns that glow brilliantly red when light shines through them. The bush makes naturally a symmetrical fountain, while the four petalled milk white blooms soon make way for a crop of globular orange fruits that begin to glow with autumn colors as early as July. A most unique specimen shrub.....\$1.25
- R. POMIFERA—The Apple Rose, with great fruits as large as crabapples following its delicate rosy blossoms. Four to six feet tall.....\$1.00
- R. RUBRIFOLIA—Another lovely symmetrical bush with finely divided plum red foliage, and rose colored blooms followed by a huge crop of brilliant, almost translucent red fruits, gleamingly smooth. A rose of such exotic appearance that it attracts the utmost attention everywhere.....\$1.25
- R. RUBIGINOSA—The oft-sung Eglanteria, the Sweetbriar rose, with foliage delightfully scented like ripe apples. Four to six feet.....\$1.00
- R. RUBIGINOSA X GYMNOCARPA—A new rose with more fragrant foliage and a hardier, more beautiful and symmetrical plant than R. Rubiginosa. Single pink bloom. Four to six feet.....\$1.00
- R. SATURATA—Bright yellow stems contrast oddly with rose red blooms which are followed by long orange seed pods. No thorns at all on this splendid species rose except for a few inches at the base. Grows eight to ten feet tall.....\$1.00
- SCHOENER'S MUSK—An unbelievable display of snowy glory; it makes the hugest trusses of any species rose, of big double white blooms followed by an immense crop of bright orange berries. A spectacular rose for a specimen plant, or when pillared. Grows eight to ten feet or more.....\$1.25
- SIERRA SNOWSTORM—A climber with perfectly healthy foliage, blooming continually throughout the season with small white blooms in trusses. This may be used in the shrub border or in any of the uses of a species rose.....\$1.00
- R. SOULIEANA—One of the showiest species, with clusters of pearly white bloom and very long orange-red fruits.....\$1.00
- R. SPINOSISSIMA—The Scotch rose, with single pink blooms set thickly along the stems. About two feet high.....\$1.00
- R. SPINOSISSIMA ALTAICA—Single lemon white blooms; a plant of about the same height as Spinosissima.....\$1.00
- R. SPINUFOLIA—Another thornless species, with large single pink blooms followed by a very large crop of fruit. Grows six to eight feet high. Very attractive vase shaped fruits. ....\$1.00
- R. WILMOTTIAE—Deep rose colored blooms coming solitary on short stalked lateral branchlets, a most graceful habit of growth. Has long bright orange fruits. Six to eight feet high.....\$1.00
- R. XANTHINA ALLARD—Lovely semi-double light yellow blooms coming generously, followed by striking fruits. Four to six feet.....\$1.00
